

DVS | DIGITAL VERIFICATION SOLUTION

Your Business Central Extension for fast processing of process-related questions.

WORK IN A RESOURCE-CONSERVING MANNER - WITH MORE TIME AND LESS PAPER

Digitization has long since found its way into many business areas. But even today, it is the routing slips with process-related, sometimes critical questions that are often distributed in paper form. The result: long waiting times, interrupted work processes and lost time.

Simova GmbH has now developed the right extension for your Microsoft Dynamics 365 Business Central application to eliminate these problems: DVS for Business Central.

Germany consumes as much paper as the continents of Africa and South America combined.

Paper consumption is rising despite digitalization.

ADVANTAGES FOR MANAGEMENT

Digitization - the buzzword of recent years has long since found its way into most companies and their structures and has led to changed and optimized work processes. However, even today, process-related, often critical questions are often put on paper slips and circulated. Loss of time due to long waiting times and often interrupted work processes are the result.

DVS puts an end to these interruptions. The extension for your Microsoft Dynamics 365 Business Central application enables you to ask questions directly from the system and specifically to selected employees. If necessary, critical work processes can be stopped until the answer is accepted. Substitution rules in case of absence are easy to set up.

- Cost/time savings
- Increased productivity
- Another step towards a paperless office
- Safeguarding of work processes

SYSTEM REQUIREMENTS

You can access DVS for Microsoft Dynamics 365 Business Central, like many other extensions, on Microsoft AppSource.

The extension can be integrated into your Dynamics 365 application with just a few clicks.

A mail server that is available for the Microsoft 365 service is required for the successful use of DVS.

ADVANTAGES FOR EMPLOYEES

A well-functioning internal communication contributes significantly to the success of a company. It is counterproductive to send critical, process-related questions on paper to colleagues. In case of doubt, you have to wait a long time for answers, work processes are stopped, important time is lost.

- Rapid exchange of information
- Fast reaction and information capability
- Location- and time-independent information
- Archiving of completed routing slips

The DVS Extension enables you to send your questions directly from the Microsoft Dynamics 365 application to selected colleagues or groups. A substitution rule is quickly set up for absences. The questions arrive in real time via the role center and can be processed quickly and easily.

The answering employee sets the status of the question to „answered“ and the creator can accept the answer - all in the shortest possible time!

All processes are stored in the system and can be retrieved at any time.

ADVANTAGES FOR THE IT DEPARTMENT

The DVS Extension transfers questions that were previously processed outside the IT landscape and often unlogged into your Microsoft Dynamics 365 Business Central environment. This makes work processes more transparent and always traceable, even in the event of unexpected staff absences.

- Compact Extension for Microsoft Dynamics 365 Business Central Systems
- Mail server must be available for the Microsoft Dynamics 365 service

DVS is made available to you as a Business Central Extension in Microsoft AppSource. With just a few clicks you can integrate the extension into your system and set it up quickly.

DVS allows you to create individual recipients or entire recipient groups as well as conveniently set up substitution rules. All processes are automatically saved and remain retrievable.
